Program Director: Wei Yu
Phone: 410-704-5528
Email: wyu@towson.edu

Towson University’s Doctor of Philosophy program in information technology prepares students for academic, research, government and state of the art industry positions. About half of our alumni are currently working as tenure-track assistant professors or research scientists across the country and abroad. After graduation, some students continued with their current company and acquired promotion to higher level positions. Others have ventured to start their own company and seek to develop innovative products. The doctoral program provides a new avenue and exciting opportunity for students, who want to become professors, scientists, entrepreneurs or assume leadership roles in their current careers.

The doctoral program is offered by the Department of Computer and Information Sciences in collaboration with School of Emerging Technology (SET). The department has over 40 professors conducting research in a variety of areas and committed to excellence in research and teaching. Faculty research covers three areas of information technology: computer science, information systems, and information technology. Students conduct their research working with their faculty adviser in one of these three areas based on their career interests and goals. The faculty has published extensively and has received grants from NSF, ARL, NIST, NRL, DARPA, other government agencies, and from industry. Admitted doctoral students may have an opportunity to work with funded research projects, in addition to acquiring academic experience as a graduate assistant in the department. Many of our doctoral students are offered teaching assistantships and serve as instructors for undergraduate courses. The doctoral student demographics include both domestic and international students.

The doctoral program requires 18 units of course work, a qualifying examination and a minimum of 24 units of dissertation beyond master’s program. Similar to other Ph.D. programs in the country, doctoral students have to demonstrate research capabilities and publish in reputed journals or conferences in order to graduate.

NOTE: Since this program is operated in collaboration with School of Emerging Technology (SET), it has a different structure of tuition and fees for part of the degree program from other graduate programs. Contact the Student and University Billing Office for more information.

Requirements
Admission Requirements

Application deadlines and a full listing of materials required for admission can be found on the website.

Degree Requirements (75 Units Beyond B.S./B.A. Degree)

1. Completion of requirements for a master’s degree (33 units) in computer science or applied information technology. (Students admitted to the doctoral program already holding a master’s degree in computer science, information systems, or information technology or any other closely related areas are considered meeting this requirement.) Students may choose to meet this requirement by completing either the master’s degree in computer science or the master’s degree in applied information technology at Towson University.

2. AIT 790 is a required course for all Ph.D. in IT students. Permission to register for dissertation credits (AIT 997) will not be granted until AIT 790 is completed with a grade B or better.

3. Completion of a minimum of 15 additional graduate-level units as recommended by the doctoral program committee, selected from courses offered in the computer science and Applied Information Technology graduate programs. For those applicants whose master’s degree is not in CS, IS or IT, the program committee may require additional course work so that the above core background is achieved. Annual GPA in course work must be at least 3.50.

4. Students must pass the qualifying examination within two attempts; one or more sections of the examination can be taken during a given attempt. Four out of seven offered sections of the exam must be passed in order to qualify, and must be completed within four years of entering the program. Information about the sections of the qualifying exam is available from the Computer and Information Sciences department website. The qualifying exam is offered twice a year, typically in January and June.

5. Satisfactory completion of the Dissertation requirements (minimum of 24 units of AIT 997—may not be registered more than 6 units per regular term or 3 units in the summer)

AIT 790 is a required course for all Ph.D. in IT students. This course should be taken before completing the qualifying exams. Permission to register for dissertation credits (AIT 997) will not be granted until AIT 790 is completed with a grade B or better.

Students are strongly recommended to have at least three research publications in peer-reviewed international conferences and/or journals before graduation.

Computer Science Track (Optional)

Students in the doctorate in IT have the option of pursuing the Computer Science track as part of their required graduate level units. Three specific
**Information Technology Ph.D.**

COSC courses (9 units) must be taken for the track in Computer Science, with additional requirements for the qualifying examination (given below). An IT doctoral student taking these three courses, passing the qualifying exam in the specified areas, and successfully completing the research requirements for the degree in a CS-related area will be eligible to graduate with a Computer Science track. **Students who completed their master’s degree in Computer Science at Towson University may have already completed the following three courses and would need to substitute other courses with the Ph.D. in IT Program Director’s approval.** (Note: Students in Ph.D. in IT program do not have to choose a track. You may have more flexibility to choose the courses and qualifying exam topics without a track.)

**Total Units** 75

**Qualifying Exam Requirements**

Students in the Computer Science track must pass the following areas of the qualifying exam:

- Operating Systems
- Advanced Data Structures and Algorithms
- Computer Networks

and **ONE** of the following areas:

- Database Management Systems
- Computer Security
- Software Engineering

**Publications**

Publications in this track are expected to be related to computer science.

**NOTE**: For additional details, contact the program director or check the Computer and Information Sciences department website.

**Learning Outcomes**

a. Students will demonstrate a comprehensive knowledge of the fundamentals in four of the following seven areas: data structures and algorithms, operating systems, computer networks, database systems, project management, software engineering and human computer interaction.

b. Students will conduct and document scholarly research.

c. Students will present scholarly research.
