

DEGREE COMPLETION OPTIONS

Nursing Degree Completion Option

Towson University offers an innovative and flexible degree completion option which builds upon the strong foundation of diploma and associate level nursing programs. Students have two pathways that can be selected, based upon where they are within their own nursing education: Registered Nurse-to-Bachelor of Science (RN-to-BS) or Associate-to-Bachelor (ATB).

RN Articulation Model

The Department of Nursing participates in a statewide RN Articulation Model. Qualified students receive up to 90 credits as part of the RN Articulation Model:

- 60 credits of non-nursing articulation credits awarded for the completion of lower-level arts and sciences coursework in the associate degree program;
- 30 upper-level nursing credits awarded for the possession of an active, unencumbered RN license in Maryland or a compact state.

The maximum any student may receive in transfer is 90 credits. The total of articulation credits may be reduced from 60 depending on the total of non-nursing credits earned at the community college. Any TU coursework that is transferred to the community college and counted toward the associate degree in nursing will not be included in a student's RN articulation credits. Students in the RN-BS option will receive the RN articulation credits at the start of their program; ATB students will receive them upon the completion of their associate degree and activation of their RN license. Students admitted to the degree completion option must complete a minimum of 30 units at TU as part of the bachelor's degree requirements.

Prerequisite Courses

To ensure successful progress through the Nursing major, students must complete certain prerequisite courses prior to enrolling in the degree completion option. The prerequisites include general chemistry with lab (4 units), nutrition for health professionals (3 units), and microbiology with lab (4 units). A statistics course must be completed prior to enrolling in the required nursing research course (NURS 435).

Options

- Associate-to-Bachelor Degree Option (ATB)
- Registered Nurse-to-Bachelor of Science Option (RN-to-BS)
